# Introduction

Chronic kidney disease patients undergoing hemodialysis

have a high symptom burden that contributes

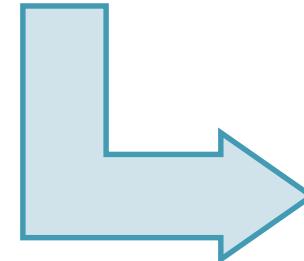

to increased suffering and diminishes their quality of life

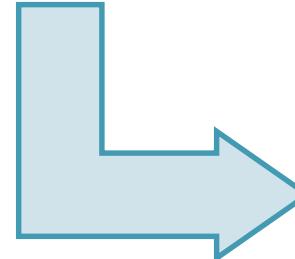

# Introduction

Cardiovascular, musculoskeletal  
and psychosocial disorders

affect their  
physical and  
functional  
capacity

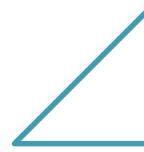

**Anxiety, stress  
and depression**

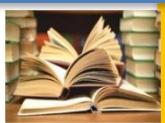

# Objectives

To determine the prevalence of stress/anxiety and depression chronic kidney disease patients

To verify the association between stress/anxiety and depression with pain and quality of life.

# Methods

## Study design

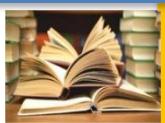

- Cross-sectional;
- Descriptive;
- Observational;

## Sample

- Random sample consisting of 183 patients undergoing hemodialysis;
- Two clinics one hospital unit in the region of Lisbon;

## Measures

- Depression Anxiety and Stress Scale (DASS-21);
- Brief Pain Inventory;
- SF 12

Sousa, L. M.M., Marques-Vieira, C. M., Severino, S., Pozo-Rosado, J. L., & José, H. M. (2017). Validación del Brief Pain Inventory en personas con enfermedad renal crónica. Aquichan, 17 (1), 42-52.

# Methods

## Procedures

- The questionnaires were administered during the dialysis session from March to June 2015

## Statistical analysis

- Disease has a two-dimensional model "Depression" and "Stress / Anxiety".
- The cut-off scores have been developed for defining mild/moderate/severe/extremely severe scores for each DASS scale.
- Association study - Pearson correlation coefficient.

## Ethical procedures

- Was approved by the Ethics Committee.

# Results

## Sample

Consisted mostly of men (59.6%);

Portuguese nationality (78.7%);

The mean age was 59.17 years ( $SD \pm 14.64$ );

Under hemodialysis treatment for 70.9 months ( $SD \pm 54.2$ );

28% of the patients were single, 53.8% married, 11.5% widowed and 6.6% divorced.

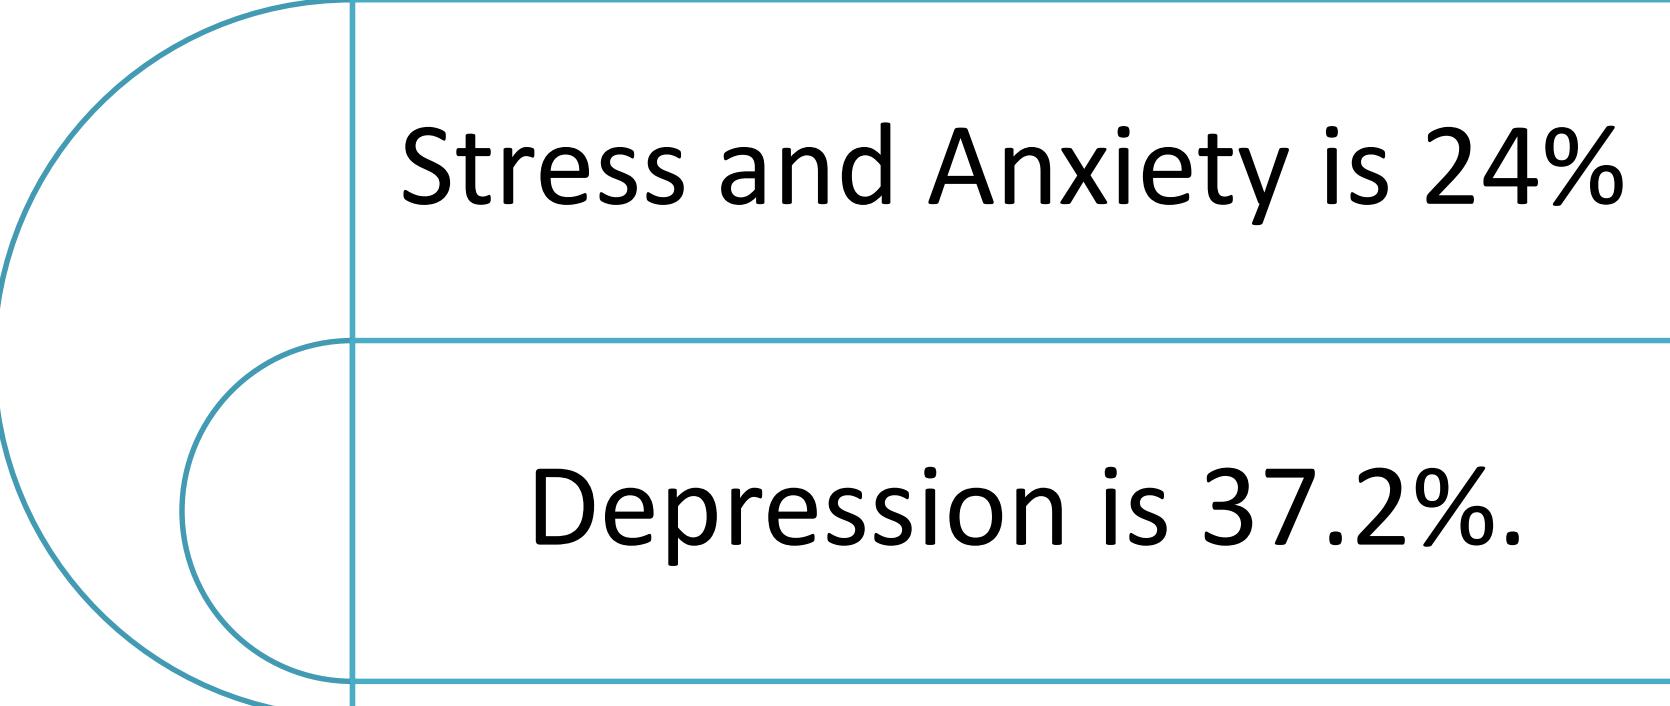

76% were retired and 24% had a regular job

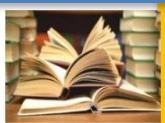

# Results

## Prevalence

Stress and Anxiety is 24%

Depression is 37.2%.

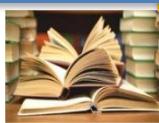

# Results

	Stress And Anxiety (DASS)	Depression (DASS)	Physical Component Quality of Life	Mental Component Quality of Life	Pain Severity
Depression (DASS)	0.729***				
Physical Component	-0.167*	-0.248**			
Mental Component	-0.477***	-0.562***	0.200**		
Pain Severity	0.243*	0.199*	-0.341***	-0.177	
Pain Interference	0.508***	0.516**	-0.413***	-0.445***	0.533***

\* <0,05; \*\* p< 0,01; \*\*\*p< 0,001

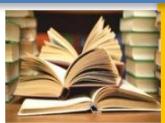

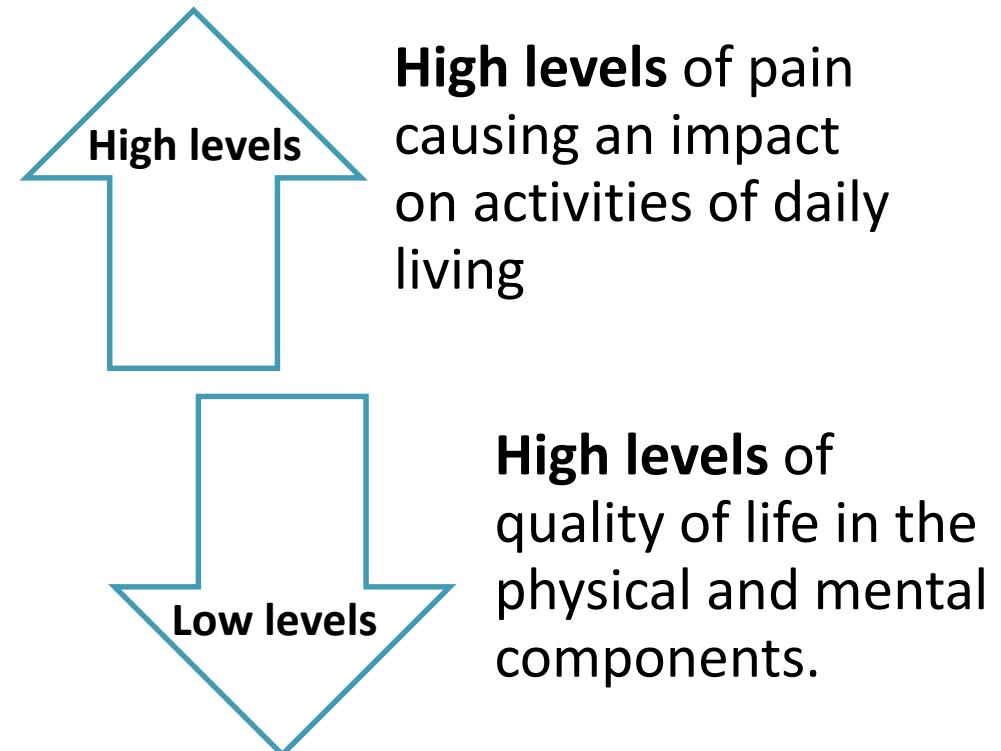

# Conclusions

Stress/anxiety and depression are **more prevalent** in chronic kidney disease patients .

**Stress/anxiety and depression are associated:**

# Conclusions

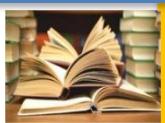

**Nurses** should develop strategies

To improve the **mental health** of chronic kidney disease patients

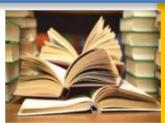

To improve their **quality of life.**
